Classical Orthogonal Polynomials

- Let (P_n) be a polynomial sequence and **u** be a functional.
- Property of orthogonality

$$\langle \mathbf{u}, P_n P_m \rangle = d_n^2 \delta_{n,m}.$$

Distributional equation:

$$\mathscr{D}(\phi \mathbf{u}) = \psi \mathbf{u}, \quad \deg \psi \geq 1, \ \deg \phi \leq 2.$$

Three-term recurrence relation:

$$xP_n(x) = \alpha_n P_{n+1}(x) + \beta_n P_n(x) + \gamma_n P_{n+1}(x).$$

• The weight function $d\mu(z) = \omega(z) dz$

$$\langle \mathbf{u}, \mathcal{P}
angle = \int_{\Gamma} \mathcal{P}(z) \, d\mu(z), \qquad \Gamma \subset \mathbb{C},$$
